

“How can I delete and add to library at the same time”

An absolutely eviscerating [18-minute walkthrough of Apple Music for macOS Catalina](#), from a few years ago. More funny than anything else, but a reminder to test the “boring” edges of your app – like a state with a lapsed subscription, or coming back after a few months.

There’s no way to drag and drop. [...] If I want to add this to here, I have to go through this bullshit, and when I do, it takes seconds again.

Also, an ode to a well-functioning back button, and well-behaving loading states. Those things add up so quickly.

(My debugging brain understood what populated the confusing History entries – I bet it was the early play sequences that went through a bunch of stuff without playing.)
